No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Aay76794

Ħ; Kubo Alitalo K, Koivunen E, New isolated peptide that inhibits VEGF-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Claim 21; Page 81; 149pp; English.

and The present invention describes an isolated peptide (I) that binds to inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I) have cytostatic, hepatotropic, antiinflammatory, hypotensive,

cr disulphide. At least one building unit is connected via a bridging group to form a cyclic structure with a moiety selected from a second building unit, side chain of or N-terminal amino acid residue. A composition containing the analogue may be used for preventing disorders such as cancers autoimmune diseases, endocrine disorders, inflammatory diseases, pancreatitis, atherosclerosis, restenosis and post-aurgical pain. It may also be used for diagnosing cancer. The backbone cyclic analogue is used for imaging the existence of metastesses. Sometostatin analogue is used for imaging the existence of metastesses. Sometostatin analogues can be used for the treatment patients with hormone-secreting and hormone-dependent tumours. They reduce diarrhosa through the effect on intestinal secretion. Sometostatin analogues selective to type of seceptors may be used for treatment of non-insulin dependent diabetes mellitus. They are useful for the prevention of atherosclerosis cand restenosis. The analogues are metabolically stable, selective in

                                                                                                            The present invention describes backbone cyclised somatostatin analogues

(I) that incorporates at least one building unit containing one nitrogen

atom of the peptide backbone connected to a bridging group (comprising an amide, thioether, thioester or disulfide) where at least one building unit is connected via the bridging group to form a cyclic structure with a molety selected from the group consisting of a second building unit, the side chain of an amino acid residue of the sequence or the N-terminal amino acid residue. (I) has antiatteriosclerotic, immunosuppressive, cytostatic, antidiabetic, antilnflammatory and analgesic activities, and creatment of anaecostatin receptor ligand. (I) are useful in the treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-associated complications, endocrine disorders, inflammation, gastrointestinal disorders, pancreatitis, post-surgical pain, and gastrointestinal disorders, pancreatitis, post-surgical pain, and the extensis. (I) can also be used in the disgnosis of cancer, by imaging the existence of metastases, it being labeled with a detectable probe.

The present sequence represents a backbone cyclised somatostatin analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

connected to a bridging group comprising an amide, thioether, thioester connected to a bridging group comprising an amide, thioether, thioester or disulphide. At least one building unit is connected via a bridging group to form a cyclic structure with a moiety selected from a second building unit, side chain of or N-terminal amino acid residue. A composition containing the analogue may be used for preventing disorders composition containing the analogue may be used for preventing disorders such as cancers, autoimmune diseases, endocrine disorders, diabetic-associated complications, gastrointestinal disorders, inflammatory consequence at the set of diseases, pancreatitis, atherososlerosis, restenosis and post-surgical pain. It may also be used for disquosing cancer. The backbone cyclic analogues can be used for the treatment patients with hormone-secreting cand hormone-dependent tumours. They reduce diarrhoea through the cand hormone-dependent tumours. They reduce diarrhoea through the cinhibition of vasoactive intestinal peptide (VIP) secretion and by direct conflection may be used for treatment of non-insulin dependent diabetes mellitum. They are useful for the prevention of atherosoclerosis and restenosis; The analogues are metabolically stable, selective in

The present invention describes backbone cyclised somatostatin analogues

(I) that incorporates at least one building unit containing one nitrogen

atom of the peptide backbone connected to a bridging group (comprising an

andie, thioether, thioester or disulfide) where at least one building

unit is connected via the bridging group to form a cyclic structure with

a moiety selected from the group consisting of a second building unit,

the side chain of an amino acid residue of the sequence or the N-terminal

amino acid residue. (I) has antiarteriosclerotic, immunosuppressive,

cytostatic, antidiabetic, antiinflammatory and analgesic activities, and

can be used as a somatostatin receptor ligand. (I) are useful in the

treatment of atherosclerosis, autoimmune diseases, cancers, diabetic-

associated complications, endocrine disorders, inflammation,

castrointestinal disorders, pancreatitis, post-surgical pain, and

restenosis. (I) can also be used in the diagnosis of cancer, by imaging

the existence of metastasses, it being labbled with a detectable probe.

The present sequence represents a backbone cyclised somatostatin analogue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Anti-HIV; Cytostatic; Immunostimulant; Gene Therapy; Vaccine;
HIV TAT protein transduction domain; human; CEMIS; hemagglutinin domain;
AID; activation induced deaminase; enzyme.

The present invention relates to chimeric proteins (I) which comprise a protein transduction domain and a deaminase domain. In (I), the protein transduction domain as chosen from poly-arginine, poly-lyaine peptide, third alpha-helix of Antennapedia homeodomain protein, HSV-1 virion protein (VP)22, HIV-1 Vpr and HIV TAT protein. The deaminase domain comprises CEMIS or Activation Induced Deaminase (AID). (I) further comprises an epitope tag which is a hemagglutinin or a polyhistidine tag, and a polypeptide domain that enhances solubility of (I). (I) further comprises a third polypeptide comprising a cytoplasmic localization protein (e.g. chicken muscle pyruvate kinase) or its fragment which chances localization of the chimeric protein to the cytoplasm. (I) is useful for interrupting HIV infectionin with (I) to allow delivery of (I) into the cell, where (I) binds with vif to interrupt HIV infection or at risk for infectivity, for treating a subject with an HIV infection or at risk for infectivity, for treating a subject with an HIV infection or at risk for the administration step is dose-dependent or transient. (I) is also cuseful for treating a subject for hyper-IgM syndrome which involves administering (I) to a subject exhibiting hyper-IgM syndrome, where (I) take the hyper-IgM syndrome. (I) is useful for treating a subject for Blymphocyte cell lymphoma which involves administering (I) to a subject exhibiting Blymphocyte cell lymphoma, where (I) is taken up by Cancerous Blymphocyte cell lymphoma, where (I) is treating a cancer and infectious diseases. The present sequence was used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention

               Antigen binding structures containing CDR's recognising the CA55.1 antigen - produced by hybridomas and host cells, for use in the diagnosis
                                                                                                                  An antigen binding structure is based on the CDRs (given in AAR76078-84) of the heavy and light chains of MAb 55.1 (ECACC 93081901), which recognises the colorectal tumor-associated antigen CA55.1. It is optionally humanized and in the form F(ab')2, F(ab)', Fab, Fv, scFv or V-min, and is produced in transgenic animals or plants. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents complementarity determinating region 1 (CDR H1) of the heavy chain of murine anti-CD23 (FCRRII) monoclonal antibody C11 (see also AAY32263). The invention provides altered antibodies, such as chimeric or humanised antibodies, which comprise sufficient of the amino acid sequences of C11 light and heavy chain CDRs (see AAY32254-59) to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cell receptor specific antibodies useful for treating e.g. arthritis, diabetes, multiple sclerosis and psoriasis.

                                                        formation for treatment of arthritis, lupus erythematosus, Habhimoto's thyroiditis, multiple sclerosis, diabetes, uveitis, dermatitis, psoriasis, urticaria, nephrotic syndrome, glomerulonephritis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, slogren's syndrome, allergie, altergic asthma, intrinsic asthma, acute asthmatic exacerbation, rhinitis, eczema, graft-versus-host disease, COPD, insulitis, bronchitis (particularly chronic bronchitis) or diabetes (particularly type 1 diabetes), and B-cell malignancies (claimed). They are also useful for studying interactions between CD23 and various ligands and determining the binding agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting proteins comprises providing solution of soluble peptide analytes, contacting solution with capture agents capable of interacting with unique recognition sequence of protein and detecting binding between
render them capable of binding to the CD23 type II molecule expressed on haematopoietic cells. The antibodies are used to block soluble CD23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      soluble peptide analyte; unique recognition sequence; URS; protein detection; clinical diagnosis; environmental diagnosis; anvironmental diagnosis; anthora discovery; protein sequencing; pathogen detection; toxin detection; anthrax toxin; small pox toxin; cholera toxin; anthrax toxin; small pox toxin; cholera toxin; darcksed protein detection array; protein expression profile; drug screening; protein characterisation; disease prognosis; pathologic cell profiling; proteome epitope tag; human; proteome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
```

Claim 60; SEQ ID NO 496; 134pp; English.

```
The invention describes a method of detecting proteins in sample. The method comprises: providing a solution of soluble peptide analytes produced by denaturation and/or cleavage of several sample proteins, and produced by denaturation and/or cleavage of several sample proteins, and optionally, labeling the solution with one or more capture agent(s), where each of the capture agent(s), where each of the capture agent(s), where each of the capture agent(s) and the peptide aunique recognition sequence (URS) of a reference protein; and detecting the binding between one or more of the capture agent sample analytes, where the detection of binding between a capture agent and a peptide analyte indicates the presence of the reference protein in the several of sample proteins. Also described are; and method of guantifying proteins in a biological sample; a method of simultaneously detecting several specific proteins in a multi-protein sample. The method of the invention is used in clinical or environmental diagnosis, drug discovery, protein sequencing and for the detection of a pathogen or cof the invention is used in clinical or environmental diagnosis, drug discovery, protein detection array is useful for: quantifying various forms (such as anthrax toxin, small pox toxin, and cholera toxin). A competitors of natural or non-natural ligands for the capture agent, interest; and to study the relationship between a subject protein capturent of study the relationship between a subject protein characterisation, for screening. The expension are useful for drug screening. The capture agents are useful for drug screening. The study protein my all dation of new potential drug targets as the providing treatment modality suggestion begen tagen or the profiling of the providing treatment modality suggestion begen are useful for identifying and/or detecting a security or screening mand transformation. The methods of saying the environment of a security or screening and security and security or screening and security and security and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            soluble peptide analyte; unique recognition sequence; URS; protein detection; clinical diagnosis; environmental diagnosis; environmental diagnosis; anthora discovery; protein sequencing; pathogen detection; toxin detection; anthrax toxin; small pox toxin; cholera toxin; apackaged protein detection array; protein expression profile; drug screening; protein characterisation; disease prognosis; pathologic cell profiling; proteome epitope tag; human; proteome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence of a human proteome unique recognition sequence (URS)

produced by denaturation and/or cleavage of several sample proteins, and optionally, labeling the collection of peptides by a detectable part; contacting the solution with one or more capture agent(s), where each of the capture agent(s), where each of the capture agent(s), where each of the capture agent(s), where each of the capture agent(s), and detecting a unique recognition sequence (URS) of a reference protein; and detecting the binding between one or more of the capture agent(s) and detecting consattations and the peptide analytes, where the detection of binding between a capture agent and a peptide analyte indicates the presence of the reference protein in the several of sample proteins. Also described are; and a method of general of sequencing several specific proteins in a multi-protein sample. The method of detecting several specific proteins in a multi-protein sample. The method of detecting several specific proteins in a multi-protein sample. To a packaged protein detection array is useful for: quantifying various forms of the invention is used in clinical or environmental diagnosis, drug discovery, protein sequencing and for the detection of a pathogen or toxins (such as anthrax toxin, small pox toxin, and cholera toxin). A packaged protein detection array is useful for: quantifying various forms of packaged protein detection array is useful for: quantifying various forms of packaged protein detection array is useful for: quantifying various forms of packaged protein and validation of natural or synthetic compounds to interest; and to study the relationship between a subject protein expression profile and that subjects response to a foreign compound or drug. The methods of assaying differential protein expression profile and that subjects response to a foreign compound or carecterisation, for screening, making prognosis of disease outcomes and comparate arrangement modality suggestion based on the profiling present or malignant transformation. The methods of susceptibility of lesions to malignant t
                                                                                                                                                                                                                                                                                                                                                                                                         Detecting proteins comprises providing solution of soluble peptide analytes, contacting solution with capture agents capable of interacting with unique recognition sequence of protein and detecting binding between agents and analytes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a method of detecting proteins in sample. The method comprises: providing a solution of soluble peptide analytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           based on the organisms proteome epitope tag. This is the sequence of a human proteome unique recognition sequence
                                                                                                                                                                                                                                                                                                            Benkovic SJ

ö AAR80638-R80659 are peptides identified using a new method of peptide detection which involves the use of a pre-selected receptor to which the peptides are isolated by screening libraries which may be very large. The dissociation rate of the individual peptides can be obtained as a measure of the amt. of receptor that binds to each isolate as a function of time. The method is used to identify peptides that are potentially useful as vaccines or as therapeutic or disgnostic agents, i.e. able to bind the pre-selected receptor and act as an agonist or antagonist. The new method enables peptides to be isolated without prior to correct PP field.) Identification of phage encoding a substrate for a specific protease - useful for identification of peptide(s) potentially useful as vaccines, therapeutic or diagnostic agents.                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                         The method relates to a method of identifying a modulator of cell growth, comprising assessing and comparing the activities of site-specific DNA recombinase (I) or type I DNA topoisomerase (II) in presence and absence of a test substance. A difference in activity of (I) and (II) assessed in the presence and absence of the test substance indicates that the test substance modulates cell growth. The identified cell growth modulator, preferably an inhibitor of (I) or (II), is useful for inhibiting cell growth in a subject, preferably a human. The inhibitor inhibits (I) which is preferably tyrosine recombinase or type I DNA topoisomerase in humans having or suspected of having tumnour or cancer, where the method further involves administering an effective of antitumour or anticancer agent or treatment; or who are, or are suspected of being infected by a bacterium, in which case the inhibitor inhibits Holliday junction intermediate resolution activity of tyrosine recombinase. The method further involves administering an effective amount of antibiotic or antibacterium.

                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of generate a model of the biological target, using the model to define a microenvironment in the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a momental library for synthesis. The novel method is useful to produce compound library for screening natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR) relating to Rhodopsin, which relates to the novel compound library production method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling
Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling

one or more amino acids required for interaction with a ligand, to generate a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for screening natural ligands such as peptides and proteins or for producing cohemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR) relating to Rhodopsin, which relates to the novel compound library production method of the invention 88888888888888888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                           "Locustakinin, a novel myotropic peptide from Locusta migratoria, isolation, primary structure and synthesis.";
Regul. Pept. 37:49-57(1992).
-!- FUNCTION: Myotropic peptide. May be important in the stimulation of ion transport and inhibition of diuretic activity in Malpighian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "A novel post-translational modification involving bromination of tryptophan. Identification of the residue, L-6-bromotryptophan, in peptides from Conus imperialis and Conus radiatus venom.", J. Biol. Chem. 272:4669-4688 (1997).

-!- FUNCTION: Does not elicit gross behavioral symptoms when injected centrally or peripherally in mice.

-!- SUBCELMULAR LOCATION: Secreted.

-!- TISSUE SPECIFICITY: Expressed by the venom duct.

-!- MASS SPECIFICITY: Expressed by the venom duct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gарв
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Novel peptides capable of binding Rhesus D antibodies are used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. hemolytic disease newborn (HDN)

of the

Claim 1; Page 12; 19pp; English.

The present sequence represents a peptide capable of binding Rhesus D antibodies (I). Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (MI) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are mimotopes which differ in their amino acid sequence from the amino acid

```
o;
perquences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (M1). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes peptides capable of binding Rhesus D antibodies (I). Also described in the present invention are: (1) a nucleic acid (II) encoding (I); (2) a vector (III) comprising one or more (II) operably linked to an expression control system; (3) a cell (IV) comprising (II) or (III); (4) preparing (I); (5) identifying (MI) peptides having immunologic properties of Rhesus D protein epitopes comprising subjecting an antibody/antibody fragment recognising an epitope of Rhesus D protein to several panning rounds with a phage display library, and identifying immunogenic peptide sequences which are

mimotopes which differ in their amino acid sequence from the amino acid sequences of Rhesus D protein; and (6) peptides (V) with immunological properties of Rhesus D protein epitopes obtained by (M1). (I) is used to manufacture an agent for the diagnosis, therapy or prophylaxis of diseases associated with Rhesus D antigen, e.g. haemolytic disease of the newborn (HDN) or idiopathic thrombocytopaenic purpura (ITP), for the manufacture of an affinity reagent for anti-Rhesus D antibodies purified or removed from body fluids or immunoglobulin preparations. Using (I) as an immunogen to raise anti-Rhesus D antibodies avoids using immunisation with foreign erythrocytes thereby avoiding the risk of transmission of viral diseases like AIDS and hepatitis B. The present sequence represents an anti-Rhesus D (RhD) antibody related peptide which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAU03601-AAU03722 represent Group B Streptococcus (Streptococcus an encapsulated bacterium which is a major pathogen of humans causing sepsis and meningitis in neonates as well as adults. The S. agalactiae antigenic polypeptides are used to vaccinate against Group B Streptococcus infections, particularly to prevent infection in new born children arising from the maternal genital tract. An immunogenic composition is useful in the preparation of a medicament for the treatment or prophylaxis of Group B Streptococcus infection. The invention does not have the disadvantages of varied response rate associated with prior art capsid polysaccharide vaccination against Group B Streptococcus
                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides derived from Streptococcus agalactiae are useful to provide detection of, and vaccination against, Group B Streptococcus infections, particularly to prevent infection in neonatals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Group B Streptococcus, encapsulated bacterium; therapeutic; sepsis; meningitis; neonate; antigenic; vaccine; infection; genital tract; capsid polysaccharide vaccination.
                                                                                                                                                                                                                                                                                                                                                                 ö

                         identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              proliferation; (7) identifying a compound that influences the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an open required for
proliferation of an organism. The antisense nucleic acids are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense; prokaryotic essential gene; cell proliferation; drug design.

drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
the gene product or that has an activity against a biological pathway itequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound, a activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of a trains or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid comprising any one of

```
the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC choopitaling a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated of polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibited by the proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway to the proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation and antibiot; (10) profiling a compound; activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound; activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound; activity, (11) a culture comprising strains in which the gene comprises or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids for cellular proliferation to isolate candidate molecules for rational compound and not form part of the present sequence is encoded by one of the target prowary of the present sequence is encoded by near of the present sequence again for thi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.

                                                                                                                       The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5481 sequences (51), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a streptococcus ample. (I) is used to detect Streptococcus in a composition comprising (I) or a nucleic acid encoding (I), may be used to accompliantly produce (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to cid encoding (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                 New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zyskind JW;

the invention traces of the production of a cell. Also included are:

the foll antisense sequences given in the specification where expression

of the nucleic acid inhibits proliferation of a cell. Also included are:

concluding a polypeptide whose expression is inhibited by the antisense acid;

concluding a polypeptide whose expression is inhibited by the antisense concluded are:

concluding a polypeptide whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular concluding the polypeptide; (6) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an accivity against a biological pathway or that has an activity against a biological pathway or the proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway or which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound activity, (11) a culture compound that inhibits proliferation of an compound activity, (12) profiling a compound activity, (13) aculture compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for for disolar equilar proliferation of an organism. The antisense moleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for the dentifier acids are useful for dentifying proteins or screening for homologous nucleic acids required for the dentifier acids and delegant and dentifier and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and delegant and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
New antisense nucleic acids, useful for identifying proteins or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense; prokaryotic essential gene; cell proliferation; drug design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gape
                                         for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

                                                                                                                                                                                                                                                                                        the invention trained by an included and where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a proniferation of a cell. Also included are:

(1) a vector comprising a proliferation of a cell. Also included are:

(1) a vector comprising a proniferation of a cell. Also included are:

(1) a vector comprising a proliferation of the antisense

mucleic acid; (2) a host cell containing the vector; (3) an isolated

contisense mucleic acid; (4) an antibody capable of specifically binding

the polypeptide or its fragment whose expression is inhibited by the

antisense mucleic acid; (4) an antibody capable of specifically binding

the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

controliferation; (7) identifying a compound that influences the activity of

proliferation; (7) identifying a compound that inhibits proliferation; (8)

compound a gene required for cellular proliferation or the biological

controliferation, or that inhibits proliferation of an

corganism acts; (9) manufacturing an antibiotic; (10) profilling a

compound's activity; (11) a culture comprising strains in which the gene

product is overexpressed or underexpressed; (10) profilling a

compound's activity; (11) a culture comprising strains in which the gene

product is overexpressed or underexpressed; (12) determining the extent

conjugation of an organism. The antisense nucleic acids are useful for

the darrifying proteins or screening for homologous nucleic acids required

for cellular proliferation in cells other than S. aureus, S. typhimurium,

crequired for proliferation in cells other than S. aureus, S. typhimurium,

crequired for proliferation in cells other than S. aureus, S. typhimurium,

creduired for proliferation in cells other than S. aureus, S. typhimurium,

creduired for proliferation of the prinied specification, but was obtained

content of the larget product by the prinied specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                               invention relates to an isolated nucleic acid comprising any one of

The invention relates to an isolated nucleic acid derived from
Enterococcus faecium encoding an Enterococcus faecium polypeptide having
CC ene of 10 fully defined sequences given in the (or comprising 40
c sequential nucleotides chosen from any of the nucleic acids, its
C complement or sequences hybridising to it). Also included are a
CC transcription regulatory element, a cell comprising the vector and a
CC transcription regulatory element, a cell comprising the vector and a
CC chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
CT he nucleic acids is useful for diagnosing pathological conditions
CC resulting from E. faecium bacterial infection (e.g. urinary tract
CC infection) and for screening drugs such as agonists and antagonists. The
CH concleic acid is useful for recombinant production of Candida albicans -
CC infection) and for screening drugs such as agonists and antagonists and avaccines containing the nucleic acid are useful for preventing or
CC derived peptides or antisense polypeptides. Pharmaceutical compositions
CC treating Enterococcus faecium infections. The present sequence represents
CC one if the disclosed E. faecium proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Enterococcus faecium

```
sequence (ABA90521) and related proceins (ABB33300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-06T-2001) which is available in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic
                                                                                                                                                                                               New nucleotide sequence useful in the identification or Lactococcus lactis and related species.
                                                                                                                                                                                                                                                                                                                                                present invention is related to a Lactococcus lactis nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleotide sequence useful in the identification or Lactococcus lactis and related species.
